9. SECURITY RECOMMENDATIONS

Immediate Actions:

- Change all MinIO access keys and secret keys immediately
- Reset all user account passwords
- Review and revoke any suspicious access tokens
- Restore any affected files from clean backup

Authentication Security:

- Enable Multi-Factor Authentication (MFA) for all accounts
- Implement account lockout after 3 failed login attempts
- Use strong password policy (min 12 chars, special chars)
- Restrict login access to known IP addresses only

Access Control:

- Apply strict bucket policies (least privilege principle)
- Restrict forensic-evidence and quarantine buckets to admin only
- Regularly rotate MinIO access keys every 30 days
- Audit all user permissions quarterly

Monitoring & Prevention:

- Keep this detection tool running continuously
- Set up email alerts for all CRITICAL security events
- Enable MinIO audit logging to S3
- Conduct monthly penetration testing on cloud storage
